

ABSTRACT

1 A wireless notification apparatus, system and method provide notifications
2 to a user relating to e-mails, voice messages, meeting and calendar reminders, or
3 any combination thereof, when the user is away from the user's desk, computer,
4 workstation, or the like. The notification system may include a notification
5 device and a base station. The notification device may have a microprocessor, a
6 display for displaying data, and a wireless receiver for receiving wireless data, the
7 microprocessor coupled with the display and the wireless receiver. The base
8 station may include a wireless transmitter for transmitting data to the wireless
9 receiver when an event has occurred at the user's desk. In this manner, the
10 wireless notification system provides time sensitive data – such as meeting
11 reminders, calendar reminders, voice message information, or email information –
12 to the intended recipient even when the intended recipient is away from his or her
13 desk.
